

Product Page

The overall product page, individual product page and the management of product page is great! I think the placement and flow of information is good, the filters and the functionality of the product management is excellent!

Here's something that I would like to further enhance:

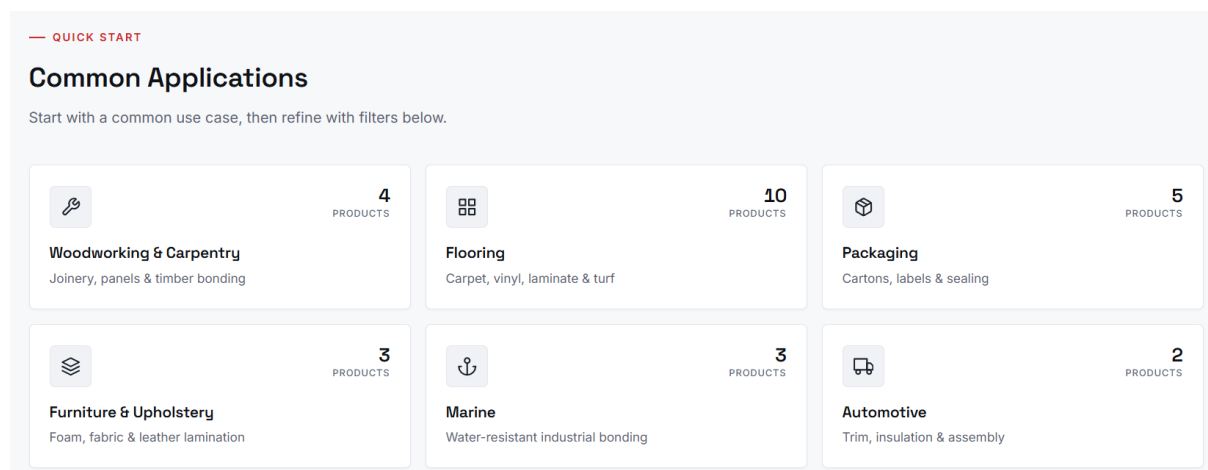

Individual Product Page.

Product Documents

1. It will be great if we can know how to manage the documents Upload, Retrieval and Deletion. If possible, it would be even more intuitive if we can manage the product image and also the product document on the same page itself. These image/document can simply be dragged and drop for ease of usage.
2. Section "Downloads"
SDS, TDS will be downloadable when its available. If no document was uploaded at this section, then we will still keep the section viewable on the product page, then we will have a text indicating "No downloads available".

When a document is downloadable, before allowing user to download, we will require them to input their Details (Name, Email, Company, Contact No.) and send this data to our Admin panel (Just like how the site enquiries is being handled). We should probably have another menu to view and delete the data of site visitors who downloaded our TDS/SDS so as to keep things managed. These data will only be managed within the Admin panel and need not be sent over to any email addresses.

Overall Product Page

How do I add in more industry types?

REFINE PRODUCTS
Refine by brand, industry, surface, or application.

Product Type

☐ Adhesives	29
☐ Spray Guns & Accessories	2

Brand

☐ Deer™ Brand	14
☐ Horsemen™ Brand	4
☐ Premier™ Brand	10
☐ Rhino™ Brand	1

Industry

☐ Automotive	2
☐ Carpentry	4
☐ Cooling Process	2
☐ Fashion	3
☐ Flooring	10
☐ Insulation	5
☐ Lift & Escalator	1
☐ Marine	3
☐ Packaging	5
☐ Plumbing & Sanitary	1

How do I add in more filters on this section?

Admin Panel (Non-Technical)

I think the admin panel is excellent because it focuses on the key tasks that a non-technical administrator is most likely to handle. Your team did a great job designing it, especially with the dashboard that provides an overview of product statuses, product management, and site enquiries. This approach keeps the admin panel clean, streamlined, and uncluttered, making the backend much more manageable, task-focused and intuitive to use.

As mentioned in Point 2 - Section “Downloads”, I think it will be good if we can have a backend showing site visitors who had downloaded our TDS and SDS.

On our product management page, it will be good if we are able to create new Categories/Filters (Product Types, Brands, Industry) so that non-technical Admin can easily add-in or remove the list. No need for technical Admin to frequently go into the backend to modify it.

Admin Panel (Technical)

Could you guide me on how to make technical changes to our website? There will be occasions when we need to update site content, wording, images, structure, layouts, and other elements.

Having access to the technical Admin Panel would allow us to keep the website current and maintain it from a technical perspective. For example, if our email address or contact number changes, I would need access to update the email addresses and WhatsApp

number associated with the site's interface and functionality, ensuring that enquiries and messages are directed to the correct contact details.

Admin Login

We can remove the admin login hyperlink at the footer. We will input the direct link for admin login when required.
